

# Business Broadband

## Business and Backup Services from ChunkyChips

*ChunkyChips utilises its own Broadband infrastructure, built on BT's well established 21st Century (21CN) platform, to deliver completely uncapped, high capacity bandwidth to smaller businesses.*

ADSL2+ delivers speeds of up to 24Mb down and up to 1Mb up, and is ideal for everyday business use such as email, web browsing and file downloading.

FTTC uses BT's new Infinity product, but we do not enforce any usage caps on the service, meaning businesses can fully utilise the huge bandwidth potential of up to 80Mb down and up to 20Mb up. Not only does this service allow for larger businesses' day-to-day activities, it creates potential to run other high-end platforms on the same line such as VoIP and video conferencing.

FTTP takes the concept one stage further, delivering fibre capacity direct to your site, at speeds of up to 110Mb down and up to 30Mb up.

Although contended at exchange level, once your chosen service is handed off to ChunkyChips, you have access to the same huge capacity as our corporate customers.

**UK-Wide Footprint**

**Unlimited Access**

**Competitive Pricing**

**Uncontended on our Network**

**Enhanced SLA Options (24 Hour Fix)**

**Suitable for High Downloads**

**Uncapped Usage**

**UK Support and Dedicated Account Management**
