

Ethernet First Mile

EFM Services from ChunkyChips

EFM delivers Ethernet-level performance at extremely cost effective rates

EFM is the replacement product for traditional SDSL services, utilising the existing BT copper infrastructure to deliver 1:1 contention at far higher guaranteed bandwidth than SDSL.

Bandwidths start from 2Mb up and down, but can be as high as 35Mb up and down in some locations, and the data rate is guaranteed and 1:1 Contention.

Presentation into your office is RJ45 Ethernet, so you can connect your equipment (switch, firewall etc) as if you are connecting into your local network.

As the BT copper is already located to site, install costs and delivery times are minimal: Virtually all EFM installations are free of charge and you can have a live service within 30 working days.

There is rarely any need for additional works, so no likelihood of excess charges, and a site survey is conducted remotely within 24 hours to confirm the feasibility of the service.

UK-Wide Footprint

Unlimited Access

Competitive Pricing

1:1 Contention

Six Hour Fix Service Level Agreement

Fast Install

Low Latency

Guaranteed Download and Upload Speeds
