

# Leased Lines

## National Ethernet Services from ChunkyChips

*Fibre services are the world's most reliable, scalable and future-proof method of connecting Offices (point to point) and providing Direct Internet Access (DIA), offering speeds from 10Mbps to 1Gbps, or even more if required.*

National Ethernet is the connectivity choice of enterprise users, but now within reach of smaller organisations due to an increasingly competitive wholesale pricing structure.

ChunkyChips delivers fibre in two variants, which determine the maximum capacity of 100Mb or 1Gb. This element is called the “bearer”, and both are presented in the form of RJ45, connecting straight into your existing infrastructure.

Traditionally, the larger the bearer, the higher the price, but this has changed in recent years to bring the two pricing models closer.

For ultimate scalability, you may wish to consider a 1Gb bearer instead of 100Mb.

National Ethernet has a longer delivery time to reflect the nature of bringing a dedicated line to your premises, however most installs complete within approximately 65 working days.

**UK-Wide Footprint**

**Unlimited Access**

**Competitive Pricing**

**1:1 Contention**

**Six Hour Fix Service Level Agreement**

**Scalable Business Options**

**Low Latency**

**Guaranteed Download and Upload Speeds**
