

CloudExchange

Hosted Exchange from ChunkyChips

CloudExchange offers massive operational savings and improved productivity

ChunkyChips are experts in Secure Data Management. Who better to trust with your Hosted Exchange mail requirements?

CloudExchange takes away the need to manage your email in-house, freeing up your IT Staff's valuable time for other projects.

Your critical data is hosted in our enterprise-level data centres across our LanKonnnect platform, with multiple layers of failover and geographical redundancy and, because your mail is managed "in the cloud", you can make changes on demand, without the need to worry about hardware, licensing and your own IT support time.

Simply set up the number of mailboxes you need to start, and we'll fully manage and support your Hosted Exchange for you.

Use CloudExchange with our Filter-Cloud service to manage spam and unwanted mail efficiently, creating white and black lists on demand.
